Data recovery software for anyone

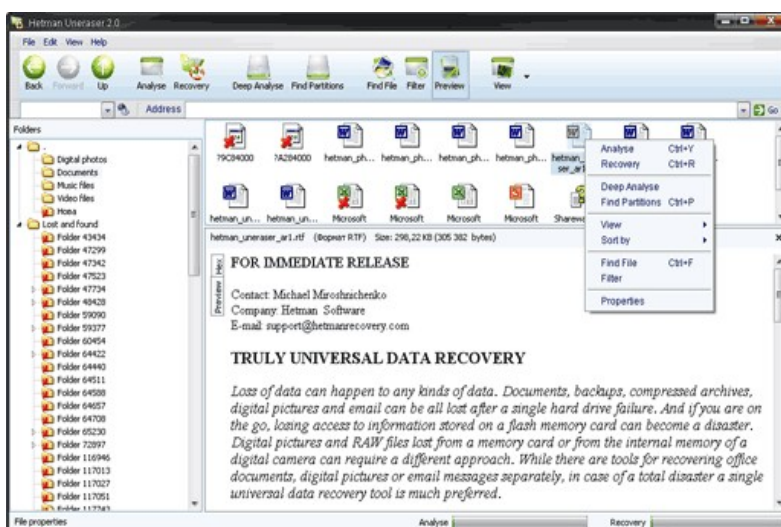

[How to recover deleted files?](#) Today our life is largely dependent on all kinds of machinery. On the one hand, it is good and convenient - as technical devices perform many complex operations much faster and more successfully than a man can do. Scientific and technological progress has given mankind cars, all sorts of household appliances (refrigerators, microwaves, video and audio), radio and television, computers and the Internet ... of course, now humanity has to live much more comfortable. On the other hand, today we have become much more dependent on all these devices. And, as you know, even the best technology is not perfect - and sooner or later may fail. Most often such an unpleasant experience with computers - probably each of us faced with such situations. When it is over just by rebooting the computer or removing a virus it is great. But sometimes the situation is worse - when, for various reasons occurred deleting the files and documents. This could happen due to user error, format drive, reinstall your operating system, power supply fluctuations and so on. This loss may have on the user's most deplorable results - because of the lost files may contain important information, the result of a long labor - for example, accounting, or nearly completed thesis, or digital photos that are not retained longer on any carrier. In any case, the value is only the fact that the remote information is of some value to the user, and he just need to restore it. Fortunately, such a recovery is indeed possible. And it can be applied to hard disks desktops, and various removable media (flash drive, memory cards, cameras and so on).
